EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 1. [Amended] A dry plaster formulation for mixing with water to form a slow drying plaster for use as a color carrier for blending colors, comprising, by dry weight:

16-22 parts Keene's cement

20-26 parts crystalline silica

3-5 parts dolomitic hydrated lime; and

[.5] 0.5 to 5 parts calcium carbonate

Claim 2. [Amended] A dry plaster formulation for mixing with water to form a slow drying plaster for use as a color carrier for blending colors, comprising, by dry weight:

19 parts Keene's cement

23 parts crystalline silica

3-5 parts dolomitic hydrated lime; and

[.5] 0.5 to 5 parts calcium carbonate

Claim 4. [Amended] A composition as claimed in claim 3, which contains 16-22 parts Keene's cement; 20-26 parts crystalline silica; 3-5 parts dolomitic hydrated lime; [.5] 0.5 to 5 parts calcium carbonate, and 1.5 to 2.5 parts water.

Replace paragraph [0002] with the following:

[0002] Background Information. The present plaster formulations, which are commercially available, have several deficiencies. When applied to the interior walls of houses, current plaster formulations are typically too shinny. People would prefer a plaster that is less shinny. The current formulations scratch too easily, which is undesirable for the workman preparing the surface and also for the homeowner. The biggest problem with current formulations is that all work with the web plaster must be done fairly quickly, because the plaster sets within about forty minutes. What would be preferable is to have more time in which to apply different layers of plaster with different colors. The different layers with different [shads] shades of colors result in an attractive effect on the wall.

Replace paragraph [0008] with the following:

[0008] Although, various combinations of these ingredients fall within the claimed invention, a preferred range of ingredients is to utilize 16-22 parts

Art Unit: 1755

Keene's cement; 20-26 parts crystalline silica; 3-5 parts dolomitic hydrated lime; [.5] 0.5 to 5 parts calcium carbonate, and 1.5 to 2.5 parts water. Water should be added until the desired consistency is achieved, this is just an approximate value.

2. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach the claimed Keene's cement plaster comprising dolomitic hydrated lime.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Busatti et al US 2,833,660 discloses a plaster comprising Plaster of Paris, lime, sand, boric acid, and rice flour. Lemmon US 2,868,660 discloses a similar plaster comprising hydrated lime, Keene cement, zinc stearate and a colorant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
